Custom Milled

FLOORING CUSTOM MILLED

Recycled Timber's have a wide selection of custom milled flooring which is produced in-house to Recycled Timber's world class processing quality standards. All Recycled Timber's team members are trained to our quality assurance program with an audited in-house training program ensuring this program is maintained to world class standards.

Our timber is precision milled, strip stacked and air seasoned for a minimum of twelve months. At this point the timber has reached equilibrium moisture content and stabilised before it is then kiln dried to Australian Standards of 9%-14% MC. Each piece of kiln dried timber is straight-lined milled and visually graded, moisture checked before it is then precision profiled into flooring.

Whilst we have standard sizes available (widths and thicknesses) all our timber flooring is run to order so customising to suit your particular requirements or match an existing flooring is something we can achieve.
