Timber Finishes

A comprehensive range of timber finishes is available, providing a perfectly tailored look to your residential or commercial project.

When precise sizing and a clean look are required, this is the optimal finish.

This timber is profiled to tolerances according to Australian Standards AS 2796.1, producing a timber finish that is smooth to the touch and requiring little or no sanding.

The surface of the timber is 'hit and miss', dressed to highlight some timber colouring and retain some of the original sawtooth markings.

Inspired by retail design fitouts, this product is finding new uses in both commercial and residential applications.

The brushing technique enhances the timber's individual patina and natural characteristics.

The finished smooth surface exposes the timber's history and can be left to age naturally or have an oil coat applied. Handbrushed is our most popular and enduring finish.

The smokey grey finish provides an eco-friendly, low-maintenance solution, resulting in a stunning pre-aged look.

The timber is lightly wirebrushed to deepen the grain prior to being coated. The coating adheres to the surface of the timber, and the timber will be weathered naturally over time.

This finish is produced when large timber is sawn, resulting in square or rectangular cross sections.

Sizes range from standard posts and beams primarily featured in domestic construction through to specially requested sizes required for architectural purposes and commercial developments.

Another popular low-maintenance solution, the charcoal finish was inspired by an ancient Japanese technique originating in the 18th century.

The intent of this method is to preserve the wood by charring it with fire to weatherproof it. A similar appearance can also be achieved with a black ash oil coating system applied.
